

## DataBridge™

Data Collection Intranet

Data Net extends its revolutionary approach to data collection into the world of Relational Database Applications. DataBridge™ creates an independent data collection intranet which enables users to rapidly configure and conduct complex real-time data processing while conserving precious RDA system resources.

DataBridge's singular design approach enables users to integrate it with any RDA across any platform. Its embedded SQL allows for real-time validation of data against one or many host database and can use the RDA's stored procedures to update all applicable tables from a single entry.

One DataBridge intranet server controls an entire data collection Web, providing a single point of access for data, permitting relative ease and economy of configuration. The unique host architecture also allows remote updating and configuration of sites, minimizing implementation and modification costs.

The DataBridge intranet's flexibility, independence and ease of configuration make it the system that can change and grow with the evolving needs of your company

### FEATURES

- Independent data collection intranet
- Browser-based terminal operations
- Easy to learn configuration script
- Visual Basic scripting
- Embedded SQL
- Embedded HTML
- Single point of access
- Rapid real-time validation
- Connectivity to multiple host databases.
